-----

Mobile network base stations are generally protected against power loss by batteries. My understanding is that they used to use negative 48V DC power, i.e. 24 2-volt lead acid cells in series, ...

Now that I have the negative power measuring correctly, would anyone have any pointers on how I can use the EmonPi to turn on an off items depending on the direction and size of ...

In this article, we present a stackable and interleaving multiphase high voltage inverting buck-boost controller that will resolve all the requirements/challenges ...

Explore a wide range of our Base Station Power Supply selection. Find top brands, exclusive offers, and unbeatable prices on eBay. Shop now for fast shipping and easy returns!

This blog post is hopefully of interest to anyone who needs a low-noise positive or negative supply, or an isolated supply, ...

This application note introduces several methods to convert a positive power supply to a negative power supply to meet miscellaneous requirements from engineers under complexity, performance, and ...

NOTE: The only switch we make that is rated for negative 48V is our WS-26-400-IDC. The power supply in it has polarity protection so if you hook it up backwards it simply will not power up ...

The central station grounding electrodes always stayed in good shape. The remote, negative, ground electrodes did tend to erode, but very slowly and if performance deteriorated due to ...

You can also modify the power supply by adding a ground binding post (which could be just a bolt with some nuts and washers) and/or a switch to select whether or not to ground.
