For each unit of DPV power generated, the utility avoids the need to purchase wholesale energy, including to make up for distribution losses. The utility derives revenue from the on-sale of DPV fed ...

The Federal Energy Management Program's (FEMP) Distributed Energy and Energy Procurement initiative helps federal agencies accomplish their missions through investment in lasting and reliable ...

In summary, many scholars have established a full-order model of the system to study the small-signal stability of off-grid distribution systems with large-scale PV penetration.

Though distributed energy resources, or DERs, offer a quick and proven way to add new capacity, they have rarely been deployed at scale to meet capacity needs. This could change, ...

Here, we apply a supply chain optimization model to perform scenario analysis of the PV supply chain development through 2021-2030 considering various European economic and job ...

This report provides a status update on FERC Order No. 2222, the current state of ISO compliance, and information relevant to the distributed wind industry as DER aggregators and other stakeholders ...

Are market forces overtaking policy measures as the driving force behind wind and solar PV? Market-driven procurement is expected to account for one-fifth of ...

Wind/PV power related data: Detailed wind/solar generation data that fully characterize plant performance and geographical spread (co-incident with load and all weather dependent data used) ...

In recent years, the pricing landscape for utility-scale power purchase agreements (PPAs) in the United States has increased notably, ...

Bulk procurement of wind-resistant pv distributions

To meet customer load, PG& E purchases wholesale electric energy and capacity from generators and suppliers. PG& E periodically conducts Solicitations/Requests for Offers (RFO) for conventional and ...
