Per the 49CFR 173.159, lead acid batteries must be packaged in a manner to prevent a dangerous evolution of heat and short circuits. This would ...

Lead-acid and lead-alkali batteries present a hazard in transportation if the corrosive electrolyte leaks from a damaged or defective battery.

To contain the corrosive acid, batteries must be secured upright within strong outer packaging. This container must be constructed from materials like wood, plastic, or fiberboard that ...

Corrosive hazards - Lead-acid batteries contain sulfuric acid electrolytes which can leak and damage other cargo. Acid-resistant pallet and ...

There are numerous plastic containers available for the storage and transport of used lead acid batteries, so why do we claim the BTS Container to be the ...

To transport batteries in a non-standardized means of containment, in compliance with CGSB-43.145, you must apply for an equivalency certificate delivered by Transport Canada.

No matter what the transport method used (truck, boat, train) the batteries should be transported inside acid resistant containers, even if the batteries are in the vertical position.

Carriers will usually require these to be drained of acid and enclosed in an acid proof liner. Some may state that the battery is also covered with soda ash (which neutralizes acid). Check with your carrier for specific regulations.
