Rail companies can install solar modules on the roof of trains to generate power for onboard services, such as air conditioning, lighting, and ...

A train developed by Swiss track maintenance company Scheuchzer will travel along the rails, laying photovoltaic panels as it ...

The transport of solar panels and all the components associated with this type of renewable energy can be done by road by truck or rail, by air or ...

Explore how rail freight enables safe, cost-effective movement of solar panels, wind turbines, and renewable energy cargo.

An international research team recently carried out a technical and economic assessment to evaluate the viability of installing PV systems between ...

Projects in Germany, Italy, France and Japan are testing solar panels between the rails. However, the Swiss start-up is the first to have designed a removable system that can be placed on...

An international analysis has suggested that deploying photovoltaic systems alongside railway tracks can be economically viable and technically ...

Swiss start-up Sun-Ways has permission to trial the first removable rail track solar panels. But there is opposition to the project on safety grounds. A ...

Switzerland has launched what's billed as the world's first removable solar power plant on an active railway. Installed in the relatively unused space between the rails, the solar panels were ...
