-----

XINING, June 9 -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, ...

China's clean energy industries drove more than 90% of the country's investment growth last year, making the sectors bigger than all but seven of the world's economies, a new analysis has...

China is the dominant force in next-generation energy technologies today. It's pouring hundreds of billions of dollars into putting renewable sources ...

Globally, China's clean energy boom is reshaping markets: the country makes 80% of the world's solar panels and 60% of its wind turbines, ...

In a landmark development for China's energy landscape, 2025 marked the first time solar power generation eclipsed wind energy. This historic transition stems from the aggressive ...

Daqo New Energy is engaged in the manufacturing of monocrystalline silicon (mono-Si), polysilicon (poly-Si), and silicon wafers, primarily for use in solar photovoltaic systems.

In China, more wind turbines and solar panels were installed last year than in the rest of the world combined. And ...

(Bloomberg) -- China's solar power generation overtook wind for the first time last year as a boom in cheap panels continues to reshape the country's grid and climate trajectory. The nation ...

For China -- the world's largest annual emitter -- this urgency intersects with a pivotal juncture in its energy transition, at which breakthroughs beyond wind and solar will determine ...
