Colombia's first grid-scale battery energy storage system (BESS) came online in 2023 near Medellin - a 20MW/40MWh behemoth that's essentially a giant Tesla Powerwall for the national grid.

The AC-coupled BESS comprises a 20-foot shipping container unit with 120 battery packs totalling 2MWh of energy storage capacity with a power ...

The new mechanism introduces technology-specific products, extends commissioning deadlines to 2035, and formally recognises energy storage as a core asset for power system ...

Located in the city of Barranquilla in northern Colombia, this project will consist of a 45 MWh lithium-ion battery energy storage system and is expected to reach commercial operation by ...

With power prices hitting \$0.23/kWh in industrial zones like Antioquia, Battery Energy Storage System (BESS) projects now deliver ROI faster than rooftop solar in Colombia.

Colombia's energy transition is entering a new and decisive stage. While the country continues to expand its renewable energy portfolio, especially in solar and wind, its ability to integrate...

Proposed new rules seek to provide greater flexibility for developers of renewable energy projects with storage components.

Colombia's Energy and Gas Regulatory Commission (CREG) has published a draft resolution establishing technical, commercial, and tariff conditions for battery energy storage systems ...

As Colombia aims to generate 20% of its electricity from renewables by 2030, Medellin's lithium battery initiative emerges as a game-changer. This project doesn't just store energy--it reshapes how cities ...
