Wait, no - aren't gaps between photovoltaic panels supposed to be bad? Well, here's the twist: complete elimination of spacing creates its own set of challenges.

2 yrs Matt Miller Probably good to leave a slight gap so that any expansion and contraction does not

Aluminium does have a good expansion rate but you do need pretty high temperature differences. If you do see the sort of differences the page below mentions, a gap could be worthwhile.

Solar panels cannot be placed compactly because it affects their output. Hence, there should be some space between two solar panels and their ...

Yes - you do want a gap between module rows. In this scenario where there is no 3rd row above it isn't as important, but thermal expansion is a real thing and giving the modules space to expand and ...

When looking at a solar panel array--whether on a rooftop or mounted on the ground--you may notice small spaces or gaps between the individual modules. These gaps are not accidental; they are an ...

Reducing Shading: When solar panels are installed in an array, having a frame with edges allows for a small gap between panels. This gap ...
