Eutectic alloys of sodium and potassium (NaK) that are liquid at room temperature and used as coolant in experimental fast neutron nuclear reactors. Salts and water form eutectic systems.

A eutectic point represents the lowest possible melting temperature achievable by any ratio of those components. This unique temperature is lower than the melting point of any individual ...

: of or relating to a eutectic alloy or solution or its melting or freezing point

A eutectic system is a homogeneous, solid mixture of two or more types of atoms or chemicals that form a super-lattice.

A eutectic structure is a uniform, intimate mixture of two or more solid phases that forms when a liquid mixture cools and solidifies at a specific temperature and composition.

The eutectic point is a unique temperature at which a combination of different substances melts or solidifies simultaneously. This temperature is the lowest possible melting point that the ...

eutectic (not comparable) Describing the chemical composition or temperature of a mixture of substances that gives the lowest temperature at which the mixture becomes fully molten.

EUTECTIC definition: of greatest fusibility: said of an alloy or mixture whose melting point is lower than that of any other alloy or mixture of the same ingredients. See examples of eutectic used in a sentence.

The page explains phase diagrams for two-component systems with eutectic points. It describes the behavior of solid and liquid phases, detailing scenarios including immiscible solids and liquid ...

eutectic, the one mixture of a set of substances able to dissolve in one another as liquids that, of all such mixtures, liquefies at the lowest temperature.
