---

The U.S. energy storage industry installed a record-shattering 57.6 gigawatt-hours (GWh) of new capacity in 2025, the largest single year of new battery capacity additions on record. Despite ...

Solar and battery storage are set to account for 79% of 86 GW of new utility-scale capacity planned in the United States in 2026, marking the largest annual increase in more than two decades ...

Despite actions in Washington targeting clean energy, over 600 GWh of energy storage is expected to be installed by 2030. This rapid deployment will help lower energy costs, enhance ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

The Solar Energy Industries Association (SEIA) has released a whitepaper recommending the US deploy 10 million distributed solar ...

A record 57.6 gigawatt-hours (GWh) of new U.S. energy storage capacity was installed in 2025, according to the U.S. Energy Storage Market Outlook Q1 2026, produced by the Solar Energy ...

Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

The Energy Information Administration said cumulative solar installations are expected to double from 91 GW to 182 GW from the end of ...

Solar and storage combined will account for 81% of new US generating capacity additions in 2025, with solar comprising over 50%, projected ...

Future installed capacity of solar energy storage
