Luckily, NiMH does not mind being overcharged at C/10 or less, which allows the charger to balance the cells during the trickle charge. As the battery reaches end-of-charge oxygen starts to ...

Nickel- and lithium-based batteries require different charge algorithms. A NiMH charger can also charge NiCd; a NiCd charger would ...

Should Batteries Be Stored Charged or Uncharged? The ideal storage charge for NiMH batteries is around 80%. This ensures the battery ...

As a result, the battery's voltage drops. And even though that drop shouldn't affect the battery's capacity, it can cause a device to think the battery ...

How to use the Refresh function: Place the "dead" battery into the smart charger. Select the "Refresh" or "Discharge" mode (refer to your charger's ...

Charging your 7.2 v NiMH battery or the 8.4 v NiMH battery never eases the concept of charging. When you slowly charge these batteries, you will not be able to detect either the 5mV voltage drop or the ...

This guidance document is provided by IATA to address the difficulties experienced by parties shipping and/or accepting UN 3496, Batteries, nickel metal hydride and equipment containing nickel-metal ...

Plug the battery's capacity into the equation and multiply it by 1.2, or 120%, since NiMH batteries require more power to charge than what they output. Then divide that answer by the ...

It is recommended that you charge with a charger that has an adjustable Delta Peak detection circuit (set to .01-.02v) eliminating the possibility of overcharging. Nickel-Metal Hydride cells will quickly get ...
