-----

With hundreds of thousands of Germans installing balcony solar panels, totaling a little over 550,000 actual panels, Germany's success with balcony solar panels is largely attributed to ...

Though not the first destination that comes to mind for abundant sunshine, Germany is leading the solar PV deployment race in Europe.

From breaker masking to voltage mismatches, America's grid isn't ready for balcony solar--yet.

Roof-mounted solar power installations on private homes in Germany could soon lose eligibility for guaranteed feed-in remuneration, according to a reform draft from the economy ministry ...

At least 800.000 solar panels have now been installed in German households, according to new figures from the Federal Network Agency (Bundesnetzagentur).

Germany plans to end subsidies for small solar power systems, gearing up to make a big change in how it supports renewable energy, like rooftop panels. The idea is pretty simple: solar ...

Wind power took first place as the strongest net electricity producer, followed by photovoltaics, which increased its production by 21 percent in 2025 ...

Germany produced 18% of its electricity through solar power in 2025, up from 14% in 2024, a significant leap that meant solar overtook both coal and ...

Germany's economy ministry plans to end subsidies for smaller solar power systems such as rooftop panels, according to a draft law seen by Reuters, pointing to lower prices for new ...

Though sunnier regions elsewhere have the potential to generate far more electricity, in Germany falling prices, improved technology and political ...
