Google's new Minnesota data center deal includes 1.9 GW of wind, solar, and an iron-air battery, the largest ever system by energy capacity.

Google's latest moonshot project could put AI computing in orbit with solar-powered satellites, reducing reliance on Earth's limited energy resources.

Alphabet 's Google will build its first data center in Minnesota and deploy a significant amount of new renewable energy in the state under an agreement with utility Xcel, the companies ...

To pick the best solar generators, we tested some of these power stations for charging capacity, ease of use, weight, and different use cases. ...

Google announced Tuesday that it will build a data center in Minnesota that's backed by 1.9 gigawatts of clean power, including a massive 300-megawatt battery made by startup Form Energy.

The Google-Xcel partnership for the Minnesota data center project includes building 1.4 gigawatts of wind power, 200 megawatts of solar, and the 300-megawatt Form battery system.

A deal led by French energy company TotalEnergies will supply large-scale solar power to Google as the tech giant ramps up its data-center footprint in Texas.

Update 4th October 2025 - The Arkansas Public Service Commission (APSC) has given the green light to Entergy's plan for a 600-MW solar power facility that will ...

Search for a city, state, or zip code to see solar potential and impact across entire geographic areas. We currently have solar data for portions of 50 states and Washington DC.

This is the first publicly announced utility-scale solar project with U.S.-built panels that's expected to qualify

Google Solar Power Station

for the domestic content tax credit. It ...
