-----

Synopsis: This article examines the process by which Israel established a management strategy for its major natural gas resources, discovered in 2009-2010.

In light of the changing security conditions, and following an assessment made in conjunction with the relevant security authorities, ...

Set out as a national outline plan, the new regulation deals with the capacities of different energy storage facilities, where they can be built and under what conditions.

Among the selected projects: Solar-driven hydrogen production, "kosher" batteries to power a yeshiva on the Sabbath, and ice bricks that store energy for cooling systems

Israel's governmental energy agency said the country plans to build four major battery energy storage system (BESS) projects in the ...

Created through a sub-committee of the National Planning and Construction Council together with the Ministry of Energy and ...

Israel is on track to meet its goal of, by 2030, producing a third of its electricity through renewable sources, Energy and Infrastructure ...

The government has announced plans for Israel's first stand-alone energy-storage facility, consistent with the aims underpinning a ...

Currently, the largest role for Israel's energy and climate policy is played by its neighbours: Egypt, Jordan, and the Palestinian Authority (PA). The first two are the countries ...
