Chile has emerged as a world leader in hybrid systems and standalone energy storage since implementing its Renewable Energy Storage and Electromobility Act in 2022.

The present paper studies the technical feasibility of the implementation of an LHTES system in a centralised space cooling system of an existing office building located in Santiago, Chile, ...

Chile will need new renewable energy storage systems to replace its current backup capacity of coal-fired plants and natural gas-powered combined cycle turbines and improve the ...

This table compares key performance metrics between liquid cooling and air cooling systems in commercial and industrial energy storage applications, helping readers understand why ...

Newer alternatives include molten salt storage - which uses salt as a medium for thermal energy - and gases produced ...

As one of the largest of its kind in Latin America and one of the world's largest DC-coupled solar-plus-storage plants, the project will increase ...

Through the deployment of cutting edge battery storage technology, Fluence is not only addressing the technical challenges of Chile's energy transition but also contributing to the nation's broader ...

With a storage capacity ranging from 4 to 5 hours, these systems provide a versatile and efficient solution for the electrical grid. Thanks to their duration ...

With transmission lines at overcapacity and permitting delays ...
