Official Google Search Help Center where you can find tips and tutorials on using Google Search and other answers to frequently asked questions.

and return a list of versions. Note: it seems to provide compatible releases rather than all releases. To get full list, use json approach from Eric.

When reading, list is a reference to the original list, and list[:] shallow-copies the list. When assigning, list (re)binds the name and list[:] slice-assigns, replacing what was previously in the list. ...

The notation List&lt;?&gt; means &quot;a list of something (but I'm not saying what)&quot;. Since the code in test works for any kind of object in the list, this works as a formal method parameter. Using a type parameter ...

I have a piece of code here that is supposed to return the least common element in a list of elements, ordered by commonality: `def getSingle(arr): from collections import Counter c = Counte...`

It gets all the elements from the list (or characters from a string) but the last element. : represents going through the list -1 implies the last element of the list

The first, [:], is creating a slice (normally often used for getting just part of a list), which happens to contain the entire list, and thus is effectively a copy of the list. The second, list(), is using the actual ...

This article is for finding public groups that end in googlegroups . To find groups in your work or school account, go to Get started with Groups: Find and join a group. You can join a group to ha

can we have list comprehension without a for loop and just if/else to put a single default value inside the list and later extend it if required? i.e. `result = [ "hello" if x == 1 ]`.
