-----

This 2D visual model illustrates the scale of the sun and planets in our solar system, and their current distance from the sun.

Its gravity holds the solar system together, keeping everything from the biggest planets to the smallest bits of debris in orbit around it. Even though the Sun is the center of our solar system ...

The Solar System is a vast and fascinating collection of celestial bodies, centered around the Sun, which is a medium-sized star. It comprises ...

The Solar System contains four small rocky planets close to the Sun - Mercury, Venus, Earth and Mars - and four giant planets on wider, colder orbits, including two gas giants (Jupiter and ...

Explore the Solar System's structure--Sun, inner and outer planets, asteroid belt, Kuiper Belt, and Oort Cloud with key features and facts.

Although solar systems are not important to the overall structure of the Universe, the one in which we live is very important from a human perspective, and it will ...

The Solar System, a cosmic neighborhood centered around our Sun, is a complex structure of planets, moons, and smaller bodies. From the rocky inner planets to the gas giants of the outer reaches, each ...

Get the list of planets in order from the Sun and discover the solar system's structure. Get tips for memorizing the order of the planets.
