This report provides (1) an overview of the microgrid planning, assessment, and design process for DoD installations and (2) is a resource for energy managers, policymakers, contractors, ...

The recommendations and conclusions may bring up new opportunities for additional student projects (IQP or MQP) that delve into more specific aspects of microgrid implementation or continue to build ...

The conceptual microgrid is designed to about 10-20% completion, providing a general description of the major design and construction elements, likely siting of major components, and suggestions of the ...

This report provides information on the process of designing and implementing a microgrid. The Butler Farms project is a continuation of the microgrid initiative taken by NCEMC that began with the ...

This study details the work of Slipstream in partnership with the City of Madison to assess the feasibility of establishing a microgrid at 1600 Emil St and 1501 W Badger Rd Streets, a site housing Streets ...

The Net-Zero Microgrid Program provides cross-cutting research to accelerate the use of renewable and zero-carbon generation in microgrids.

This section of the report assesses ten distinct microgrid scenarios developed during this planning project. The first subsection provides an overview of the Wallowa County Resilience ...

This report presented a summary of technical attributes of the IRES microgrid projects planned resources. The resource plan includes generation (e.g., PV), ES (e.g., BESS) and controlled loads ...

This final project report presents the results of the development, installation, and deployment of a microgrid system and controller at the Kaiser Permanente hospital in Richmond, California.

While DOE has made significant progress in supporting microgrid deployments, there remain research gaps

Microgrid construction plan report

for both remote microgrid, and microgrids for critical infrastructure, which are being addressed ...
