Iceland might be the first place in the world to gather solar energy from space via a satellite that would then beam 30 megawatts of energy back ...

Imagine a kilometre-wide solar array orbiting Earth, harvesting limitless, uninterrupted solar energy and beaming it back home, day and night, ...

Japan Aims to Beam Solar Power from Space: The OHISAMA Project and the Future of Clean Energy. In a bold step toward redefining the ...

As SBSP technology improves, many nations might compete to be the first in developing fully operational space solar power stations for the sake of ...

SpaceX has filed a request with the Federal Communications Commission to launch a constellation of up to 1 million solar-powered satellites ...

A nation that can construct solar power satellites would demonstrate capabilities in space logistics, large-scale assembly, and power transmission that could revolutionize military operations in ...

The vision includes launching a constellation of up to one million satellites that would function as orbital data centers, dramatically expanding global AI compute capacity. SpaceX ...

In an accordion-like motion, five solar panels successfully unfolded from the JPSS-4 satellite during its solar array deployment test, marking a major milestone for the next satellite launch ...

Japan is launching a bold new space mission that could flip the switch on how the world gets its power.

RD2 uses flat panels, with solar cells facing away from Earth and microwave emitters facing toward the Earth. RD2 generates power 60% of the year due to its limited capability to reposition itself or redirect ...
