With installations surging across major markets and China driving the charge, 2025 is on track to be another record-breaking year for solar power.

China and the US may be reducing policy support for the solar power sector, but Goldman Sachs Research still expects rapid growth, with solar ...

Delays in solar project schedules tend to be relatively short in duration, and reports of delays are more common than cancellations: less than 1% of planned solar capacity is entirely ...

Solar plants are touted to operate for around 25 years -- half the time or less that fossil fuel or nuclear plants operate. The Ivanpah solar plant in California -- touted to be the largest of its ...

Solar power is no longer a niche solution. It's a fast-growing, mainstream energy source reshaping the US power grid. Solar capacity ...

The Major Solar Projects List is a database of all ground-mounted solar projects, 1 MW and above, that are either operating, under construction or under development. The list is for ...

In the first half of this year, China built more solar than the rest of the world combined. Seventy-four percent of all large-scale wind and solar projects are being built in China.

In the next three decades, the solar PV field can advance to become the second prominent generation source by constructing more solar farms, allowing countries to generate ...

Global solar installations are on track for another record year. In the first six months of 2025, the world added 380 GW of new solar capacity -- 64% higher than during the same period in ...

Now there are still a few solar power plants

Some data are also included for plants that are either mothballed, retired, or canceled. The tracker further provides national totals for distributed solar capacities for 31 countries/areas.
