We manufacture several sizes and weights of products that are specifically designed for the strict quality requirements of the solar panel industry. High compressive strength and density combined with low ...

A solar ballast system is an engineered mounting solution that utilizes calculated weight distribution--typically concrete blocks or specialized ...

These durable, easy-to-install blocks are designed specifically to keep solar arrays firmly in place, providing a strong foundation that doesn't require ...

Solar Panel Ballast Block, engineered to meet ASTM C90 standards, provides a reliable and durable solution for securing solar panel arrays. Trusted by ...

Faddis is catering to rising demand by making precast concrete ballasts, also called footings or foundations, for PV solar collector rack systems. There are a variety of designs in use.

As solar installations expand globally, the need for robust photovoltaic panel block reinforcement schemes has become critical, especially with increasing climate volatility

The Solar Panel Ballast Blocks provided by RCP Block & Brick are a durable and simple way to add ballast weight to your solar panel array. Trusted and used by professional solar energy system ...

Our solar panel ballast blocks provide non-invasive, ground-mounted systems for commercial solar farms. Available in two standard sizes with quick delivery and ...

Solar Ballast blocks are specifically designed for freeze thaw durability and work with solar panel racking systems. Conforms to ASTM C1491-14 and C1884-18...
