The U.S. energy storage industry installed 57.6 GWh of new capacity in 2025, the largest single year of new battery capacity additions on record. Energy storage installations grew 30% from ...

The U.S. Installed 58 GWh of Storage Capacity in 2025 U.S. battery energy storage capacity now reaches 166.1 GWh of installed capacity, up 53% from the end of 2023. This is enough to power ...

We use the Regional Energy Deployment System Model (ReEDS), a capacity expansion model, to estimate the average and marginal capacity credits of solar PV, wind, and battery storages at a high ...

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

Millions of solar projects have been installed in the US; and while most solar installations do not include any form of energy storage, pairing solar with battery storage has become increasingly common.

Calculate exactly how much battery storage you need for backup power, bill savings, or off-grid living. Free calculator + expert sizing guide included.

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

From Texas-sized utility projects to skyrocketing residential battery attach rates, 2026 marks the year solar and storage transition from the electric grid's fastest-growing additions to its ...

Solar and battery storage are set to account for 79% of 86 GW of new utility-scale capacity planned in the United States in 2026, marking the largest annual increase in more than two decades ...
