-----

Most of the building is taken up by 192 enormous lasers and the generators that power them. The beams from those lasers are focused into a tiny chamber the ...

Australian researchers have created a device that can produce power from heat radiation using a similar mechanism to night-vision goggles. ...

Could humans ever harness the power of the Sun directly, capturing its energy not through plants, not through fossilized remains, but as raw, pure, blazing starfire?

There's a stark contrast between the freezing temperatures of space and the relatively balmy atmosphere of Earth, and that contrast could help ...

Professor Shanhui Fan and his team have developed a method to harness the natural process of radiative cooling, allowing solar panels to convert ...

Starpath builds gas stations for rockets on the Moon and Mars. These need a lot of power - so we made the largest and most advanced space solar factory on Earth. We call it Starlight. Now you can buy ...

Could solar power in theory be driven by starlight? Current systems are optimized for sunlight and an inverter uses far more power than starlight...

Researchers are continually developing technology to enhance nighttime solar power generation. This includes creating solar panels that can ...

As the Earth emits infrared light, the semiconductor captures this energy and generates an electrical current. By capturing and converting this ...
