A review by the SUN DAY Campaign of data just released by the US Energy Information Administration (EIA) reveals that the mix of renewable energy sources provided ...

But how much of an impact has this growth had on our energy systems? In this interactive chart, we see the share of primary energy consumption ...

Renewable sources of electricity generation continue to grow strongly around the world. Global capacity is expected to more than double by 2030, ...

The aim of this review paper is to understand and study further the current RE technologies such as solar energy, hydro energy, wind energy, bioenergy, geothermal energy, ...

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity. For ...

Explore the five different types of renewable energy and how each one plays a key role in a more sustainable future for the planet.

Renewable energy (also called green energy) is energy made from renewable natural resources that are replenished on a human timescale. ...

There are two main types of solar energy technologies--photovoltaics (PV) and concentrating solar-thermal power (CSP). On this page you'll find resources to learn what ...

The three main dispatchable sources of electricity generation (natural gas, coal, and nuclear) accounted for 75% of total generation in 2025, but we expect the share of ...

Solar power generation and other new energy sources

Solar energy is a form of renewable energy, in which sunlight is turned into electricity, heat, or other forms of energy we can use. It is a ...
