Solar and battery storage are set to account for 79% of 86 GW of new utility-scale capacity planned in the United States in 2026, marking the largest annual increase in more than two decades ...

Discover how advancements in solar, battery storage, and AI are driving the U.S. generating capacity expansion, with a projected 63 GW ...

Together, solar and battery storage account for 81% of the expected total capacity additions, with solar making up over 50% of the increase. In 2024, ...

Solar and battery storage are expected to lead new US generating capacity additions in 2025, says the US Energy Information Administration (EIA).

Battery storage will continue its rapid expansion, enabling higher penetration of solar and wind on the grid. As storage costs fall further, renewable portfolios will increasingly operate like ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

EIA forecasts 86 GW of new US generating capacity in 2026, surpassing 2025 levels. Solar, battery storage, wind, and natural gas investments highlight accelerating energy transition trends.

Solar power leads 2026 generation additions "We expect 2026 to be another big year for solar additions, similar to the record utility-scale solar capacity added to the U.S. grid in 2024 (30.8 ...

From Texas-sized utility projects to skyrocketing residential battery attach rates, 2026 marks the year solar and storage transition from the electric grid's fastest-growing additions to its ...
