---

The US added 57 gigawatt-hours (GWh) of battery storage capacity to its electric grid last year - enough to supply the annual electricity needs of roughly five...

2. Introduction it transitions toward an electrified, carbon-neutral energy future. This transition presents numerous opportunities for states, including job creation, economic growth, improved public health, ...

Despite actions in Washington targeting clean energy, over 600 GWh of energy storage is expected to be installed by 2030. This rapid deployment will help lower energy costs, enhance ...

As part of the Department of Energy's (DOE) Energy Storage Grand Challenge (ESGC), DOE intends to synthesize and disseminate best available energy storage data, information, and analysis to inform ...

Coalition members are leading the charge in deploying energy storage infrastructure, manufacturing grid batteries in factories across the United States, refining and producing battery materials, and investing ...

Today's investment commitment aims to advance a manufacturing expansion in the United States that could enable American-made batteries to satisfy 100% of domestic energy storage project demand ...

The United States closed 2025 with a historic record in energy storage, installing 57.6 GWh of new battery capacity, the largest annual increase ever recorded. ...

The U.S. energy storage industry installed a record-shattering 57.6 gigawatt-hours (GWh) of new capacity in 2025, the largest single year of new battery capacity additions on record. Despite ...

Maintaining a robust electric grid is crucial as the nation experiences rapid transformation ranging from new electricity generation resources to ...
