This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find ...

The review comprehensively examines hybrid renewable energy systems that combine solar and wind energy technologies, focusing on their current challenges, opportunities, and policy ...

As the global energy environment shifts toward sustainability and resilience, this review helps researchers, policymakers, and industry stakeholders understand, adapt, and enhance PV ...

As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion ...

Top 10 states for electricity generated from solar (utility-scale and small-scale) and wind in 2024. Find data for all 50 states and Washington, D.C. ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated ...

Here, we demonstrate the potential of a globally interconnected solar-wind system to meet future electricity demands.

The authors say it's a sign that renewables can keep up the pace with the growing appetite for electricity worldwide. Worldwide solar and wind power generation has outpaced electricity ...

This report underscores the urgent need for timely integration of solar PV and wind capacity to achieve global decarbonisation goals, as these technologies are projected to contribute ...
