This innovative tool systematically catalogizes all energy storage projects within Europe, from the first planning phase to operational operation.

However, despite an exponential growth in Europe's battery energy storage capacity, which reached 36 gigawatt-hours in 2023, pumped hydro still ...

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be filtered by country, ...

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the energy storage.

It offers near real-time data on the deployment of storage facilities across Europe, including an interactive dashboard and map, and identifies all ...

The regulation promotes the use of energy storage in the EU's energy system, including the requirement for Member States to ensure that energy storage facilities have access to the grid on non ...

On 17 December, Hyperion Renewables launched construction of its first battery energy storage projects in Portugal, in Estremoz and Évora. The 16 MW / 64 MWh solar-plus-storage projects will support ...

The purpose of this database is to give a global view of all energy storage technologies. They are sorted in five categories, depending on the type of energy acting as a reservoir.

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when there ...
