The U.S. has become a "side character" in the global story of renewable energy, experts say. China dominates the sector, with positive implications for the climate and their economy.

In China, more wind turbines and solar panels were installed last year than in the rest of the world combined. And China's clean energy boom is ...

The United States should go a few steps further by working to reduce the technology gap with China on long-distance transmission. This would ...

While in China, new solar PV and onshore wind were already cost-competitive with existing coal (the country's main electricity generation technology) in 2024, in the United States they ...

China supplies over half of the United States' imports of battery energy storage systems and low-voltage transformers, and it is a leading refiner of almost all the critical minerals necessary for the energy ...

China leads globally in combined wind and total solar capacity, with at least 1.6 TW in operation, based on data through December 2025, including 489 GW of distributed solar. The United States follows, ...

From solar and wind to electric vehicles and battery production, China's rapid expansion and massive investments are reshaping the clean ...

Wind and solar, bolstered by giant batteries that can store their energy, are also becoming an increasingly dominant force in the US, but on a ...

The gap between China and the United States in wind and solar hybrid power supply for communication base stations

Research, investment, and policy pivotal for future energy demands. The review comprehensively examines hybrid renewable energy systems that combine solar and wind energy ...

While the United States will face a range of choices when addressing the dual imperatives of maintaining energy security ...
