---

Depending on the local regulatory environment, some or all wholesale costs may be passed through to consumers. These are costs per unit of energy, typically ...

Below, you can find resources and information on the basics of solar radiation, photovoltaic and concentrating solar-thermal power technologies, electrical grid systems integration, and the non ...

The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

Use WeatherPower graphics to show daily wind and solar electricity generation based on weather of the day and installed capacity in your area.

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Combined Wind and Solar is a graphical representation of estimated wind and solar power production amounts for the Current Operating Day and the Next Day.

Wind Generation Pattern: Wind often peaks at night and during winter months when solar output is lowest. In many regions, wind resources are stronger during winter heating demand periods.

Run simulations of hourly power output from wind and solar PV farms by clicking anywhere on the map, choosing your technology from the side menu, and hitting &quot;Run&quot;.
